

(Formerly Satori Resources Inc.)

MANAGEMENT'S DISCUSSION AND ANALYSIS

For the three and nine months ended September 30, 2024 and 2023

INTRODUCTION

This Management's Discussion and Analysis ("MD&A") is dated November 29, 2024 and provides relevant information on the operation and financial condition of Canadian Gold Corp., formerly known as Satori Resources Inc., ("Canadian Gold" or the "Company") for the three and nine months ended September 30, 2024. The MD&A should be read in conjunction with the Company's financial statements and notes thereto for the three and nine months ended September 30, 2024 and the year ended December 31, 2023, which have been prepared according to International Financial Reporting Standards (IFRS) and can be found under the Company's profile on SEDAR+ at www.sedarplus.ca.

All currency amounts in the MD&A and in the financial statements are expressed in Canadian dollars unless otherwise stated.

Canadian Gold is a junior mining exploration company and a reporting issuer in each of the Provinces of Ontario, British Columbia and Alberta. Its head and principal office is located at Suite 2702, 401 Bay Street, Toronto, Ontario. The common shares of the Company are listed on the TSX Venture Exchange under the symbol "CGC". Canadian Gold's property of merit is the Tartan Lake Gold Mine Project located near Flin Flon, Manitoba ("Tartan Lake" or the "Project"). In the third quarter of 2020, Canadian Gold approved the formation of an Advisory Committee and appointed a key technical person having prior experience at the Project, as its first and lead member. Canadian Gold is also in the process of evaluating new opportunities in the mining sector.

The current mineral resource estimate for the Tartan Lake Project is disclosed in the report titled "Satori Resources Tartan Lake Project Technical Report, Manitoba, Canada April 2017" dated April 5, 2017. The report, issued by Mining Plus Canada Consulting Ltd., is available on SEDAR+ as well as on the Company's website for reference. Allan Armitage, Ph.D., P. Geol, of GeoVector Management Inc., is the independent qualified person, as defined by National Instrument 43-101 ("NI 43-101") of the Canadian Securities Administrators. Dr. Armitage is a resident of Fredericton, New Brunswick and a Professional Geologist registered with the Association of Professional Engineers, Geologists and Geophysicists of Alberta.

INCORPORATION AND BASIS OF PRESENTATION

Canadian Gold was incorporated on October 24, 2011 under the Business Corporations Act (British Columbia).

NATURE OF OPERATIONS

The Company's activities are currently directed towards exploration and development of a mineral property near Flin Flon in the Province of Manitoba, Canada. Canadian Gold's principal project is the Tartan Lake Gold Mine Project, a mineral property which hosts a past-producing underground mine.

CORPORATE UPDATES

On April 24, 2023, the Company completed the acquisition of Apollo Exploration Inc. ("Apollo"), a private company wholly-owned by Mr. Rob McEwen, in consideration for the issuance of 60,000,000 common shares of the Company. Apollo, now a wholly owned subsidiary of the Company, holds interests in key exploration projects in the vicinity of Canada's largest gold mines and development projects. Provided only that Mr. Rob McEwen holds not less than a 20% interest in the Company (i) the Company shall not sell or otherwise dispose of any interest in a royalty or metals streaming financing offered by a bona fide third party, without first offering same to Mr. Rob McEwen; and (ii) with the exception of a rights offering, Mr. Rob McEwen shall have the right, and not an obligation, to participate in equity financings in order to maintain his pro rata interest in the Company. Rob McEwen holds a 34.68% interest in the Company as of the date of this MD&A.

Concurrent with the acquisition of Apollo, the Company appointed Ian Ball as Interim President and CEO commencing April 26, 2023. Mr Ball resigned as Interim president and CEO on October 17, 2023. Mr. Ed Huebert was appointed as President and CEO on October 18, 2023, until his resignation on April 5, 2024. On April 9, 2024, the Company announced the appointment of Mr. Michael Swistun as President and CEO. Mr. Swistun has held significant senior executive roles in Canadian businesses, including acting as the key advisor to the prior Premier of Manitoba.

On August 6, 2024, the Company reported initial surface reconnaissance results including 35.4 g/t Au, 7.1 g/t Au and 2.9 g/t Au from the Hammond Reef South property in Ontario. The Company plans additional field work and sampling to follow up these initial results.

In 2023 the Company concentrated its exploration efforts at the Tartan Mine focusing on two key target areas: (i) the Main Zone; and (ii) the Hanging Wall Zone, an adjacent zone within 10 metres of the Main Zone. The overall objective for the Company was to demonstrate continuity of the mineralization at depth, increase the size of the extent of high-grade mineralization for a future updated resource estimate, and increase the ounces per vertical metre of the deposit. During 2023, the Company drilled 4,362 metres completing its Phase 1 drilling in September 2023 and commencing its Phase 2 drilling campaign in November 2023. Drilling at the Main Zone and Hanging Wall Zone, which targeted resource growth at depth, returned a highlight hole of 12.0 gpt gold over 8.0 metres, inside the widest and deepest intersection in Tartan Mine history, namely, 4.2 gpt gold over 53.7 metres. The Phase 2 drilling started in November 2023 with 3 holes having been completed prior to 2024. Highlights from the phase 2 program from results received to date include 2.7 gpt gold over 25 metres including 12.7 gpt gold over 3.2 metres at Main Zone. The 2023 drilling has now increased the vertical extent of the high-grade gold mineralization at the Main Zone by 415 metres below the resource estimate representing an increase of 72% (from the time of the resource). The Company plans to focus drilling and analyses on specific areas within: (i) the South Zone which remains open with untested targets below 250 metres; (ii) the Main Zone and Hanging Wall Zone; and (iii) a potential Volcanogenic Massive Sulfide (VMS) anomaly situated 850 metres to the Northeast of the Tartan Mine.

Canadian Gold received its Exploration Permit for the Tartan Lake Project, valid for a three-year period (2024) and allowing for 155,000 metres of drilling. Following on the 2021 drilling, the Company completed its spring 2022 drilling campaign, where 2,900 metres had been drilled, and a fall 2022 program where three holes were drilled (981 metres) at the Tartan Lake Project.

MINERAL PROPERTIES

Tartan Lake is owned 100% by the Company and is subject to a 2% net smelter return royalty ("NSR"). The Company has the right to buy-down the NSR at any time for \$1 million per each 1%.

Apollo, now a wholly owned subsidiary of the Company, holds interests in key exploration projects in the vicinity of Canada's largest gold mines and development projects, namely: (i) the Malartic South Project located near the Canadian Malartic Mine in Quebec; (ii) the HEES Project located near Barrick Gold's Hemlo Mine in Ontario; and (iii) and the Hammond Reef North & South Projects located due south of Agnico Eagle's Hammond Reef Gold Project in Ontario.

During the year ended December 31, 2023, the Company incurred a total of \$2,859,100 of exploration expenditures (year ended December 31, 2022 – \$1,787,036). Included in the 2023 total is \$894,141 related to exploration properties acquired in the Apollo acquisition.

Tartan Lake Gold Mine Project, Flin Flon, Manitoba - 100% Interest

Overview and Project History

The Tartan Lake Gold Mine Project is located 12 kilometres ("km") directly northeast of the town of Flin Flon, Manitoba, Canada. The Project is approximately 2,670 hectares in area and consists of 20 mineral claims. Tartan Lake is road accessible from Flin Flon by means of all-season gravel road which turns north from paved Highway 10 over a total distance of approximately 29 km. The town of Flin Flon has all the services to support mineral exploration and mining and is accessed by highway, railroad, and regularly scheduled air service. Tartan Lake is serviced by grid electricity.

The Tartan Lake Gold Mine Project was operated by Granges from 1987-1989 with approximately 47,000 ounces of gold recovered. The operation consisted of a 450 tonne per day gold processing facility with related infrastructure, a vent raise to surface, and a decline ramp providing access to six Levels accessing the Main and South Zones to a vertical depth of 315 m from surface. In 1989, the process facility ceased operations due to low gold prices and a significant mechanical failure and was placed into care and

maintenance, while the ramp and underground workings were allowed to flood. The electricity grid power connection and on-site heating remain operational.

Project Geology

The Tartan Lake Gold Mine Project is located within the Flin Flon greenstone belt ("FFGB"). The FFGB belt is a collection of tectonic assemblages that was assembled early in the evolution of the Paleoproterozoic Trans-Hudson Orogen. The portions of the belt exposed on or near surface are approximately 250 easterly by 75 northerly km. The FFGB has undergone four major phases of deformation. These have contributed to the development of the major structures that host the gold mineralization at Tartan Lake. Sub-greenschist facies metamorphism is present in the southern of the property increasing to amphibolite facies to the north near the Kisseynew domain.

The Tartan Lake shear zone complex is a strong east-west trending zone, which contains the Tartan Lake gold deposits. Near the mine, the main shear zone forms the contact between the footwall gabbro/diorite intrusive to the south and the hanging wall Amisk Group rocks to the north. The shear zone is 30 to 50 m wide, steeply dips to the north and trends to the west. Gold mineralization at Tartan Lake Mine is hosting within multiple sub-parallel, anastomosing quartz carbonate mesothermal veins hosted within steeply dipping east-west shear zones with a trend and plunge about 70° to the northwest.

The gold mineralization is dominated by free gold with various associated sulphide minerals. The highest gold grades were associated with pyrite and chalcopyrite. Historically, much of the gold reported to the gravity circuit with the remaining recoverable gold extracted from the gravity tails through flotation/cyanidation.

Mineral Resource Estimate

On February 23, 2017, the Company announced a resource estimate for its 100% owned Tartan Lake Gold Mine Project.

The mineral resources were estimated by Mining Plus Canada Consulting Ltd. ("Mining Plus") in accordance with NI 43-101 and as set out in the Canadian Institute of Mining, Metallurgy and Petroleum Definition Standards for Mineral Resources and Mineral Reserves (2014). Allan Armitage, Ph.D., P. Geol, of GeoVector Management Inc., is the independent qualified person, as defined by National Instrument 43-101 ("NI 43-101") of the Canadian Securities Administrators, for the resource estimate. Dr. Armitage is a resident of Fredericton, New Brunswick and a Professional Geologist registered with the Association of Professional Engineers, Geologists and Geophysicists of Alberta.

The mineral resource estimate is summarized in Table 1 at a range of cut-off grades.

Table 1: 2017 Mineral Resource Statement, Tartan Lake Gold Mine Project

Cut-off Grade	Tonnes	Grade (g/t Au)	Au Ounces
Indicated Resources			
0.0 g/t	4,720,000	2.42	367,000
2.0 g/t	1,820,000	4.97	290,000
3.0 g/t	1,180,000	6.32	240,000
4.0 g/t	830,000	7.55	201,000
Inferred Resources			
0.0 g/t	1,210,000	1.92	75,000
2.0 g/t	450,000	3.74	54,000
3.0 g/t	240,000	4.89	38,000
4.0 g/t	140,000	5.93	27,000

Notes:

1. CIM Definitions Standards (2014) were followed for mineral resource estimation.
2. The Qualified Person is Allan Armitage, Ph.D., P. Geol, of GeoVector Management Inc.
3. All figures are rounded to reflect the relative accuracy of the estimate
4. Mineral resources are not mineral reserves and do not have demonstrated economic viability
5. The estimate of mineral reserves may be materially affected by environmental, permitting, legal, title, taxation, sociopolitical, marketing, or other relevant issues
6. Effective date of the mineral resource estimate is February 20, 2017

RESULTS OF OPERATIONS
FOR THE THREE AND NINE MONTHS ENDED SEPTEMBER 30, 2024

Overview

For the three and nine months ended September 30, 2024, Canadian Gold reported net losses of \$1,040,174 and \$2,325,998, respectively (three and nine months ended September 30, 2023 - \$725,303 and \$1,572,725, respectively).

Revenues

Canadian Gold is in the exploration and development stage and has no revenue from mining operations.

Non-Exploration Expense Summary

A summary of the activity for the three and nine months ended September 30, 2024 and 2023 is as follows:

	2024	Three Months (Restated Note 3) 2023	2024	Nine Months (Restated Note 3) 2023
Exploration and evaluation expenses	\$1,061,187	\$609,110	\$2,282,377	\$1,161,956
Management fees	70,350	31,500	210,232	86,500
Directors fees	28,569	26,893	88,241	70,983
Investor relations, advertising and promotion	35,840	15,680	81,568	82,080
Filing and transfer agent fees	9,989	11,573	57,889	53,603
Salaries, wages and benefits	16,787	4,890	54,447	20,236
Consulting fees	13,515	5,360	35,950	14,484
Insurance	10,500	11,335	31,721	30,030
Accretion	5,822	5,706	17,465	17,119
Legal and paralegal	7,681	2,202	11,227	2,247
Office and miscellaneous	4,787	(1,229)	8,249	14,571
Amortization	2,282	2,283	6,797	5,409
Travel	(3,302)	---	---	5,354
Professional fees	---	---	---	4,638
Stock-based compensation	---	---	---	3,335
Total expenses	\$ 1,264,007	\$725,303	\$2,886,163	\$1,572,725

Management fees increased in 2024 compared to 2023 with the hiring of a new CEO and an increase in the number of personnel. Director fees increased due to an increase in the number of directors.

Investor relations, advertising and promotion expenses in 2024 is consistent with the 2023 spend and is dependent on market conditions and decisions regarding cash allocation.

Exploration Activities and Expenditures

A summary of exploration activity for the nine months ended September 30, 2024 and the year ended December 31, 2023 is as follows:

	<u>Tartan Lake</u>	<u>Apollo Properties</u>	<u>Total</u>
At December 31, 2022	\$ 6,247,656	\$ ---	\$6,247,656
Acquisition	---	894,141	894,141
Additions	1,931,011	33,948	1,964,959
At December 31, 2023	\$ 8,178,667	\$ 928,089	\$9,106,756
Additions	2,168,615	97,646	2,266,261
At September 30, 2024	\$ 10,347,282	\$ 1,025,735	\$11,373,017

LIQUIDITY AND CAPITAL RESOURCES

As at September 30, 2024, the Company had \$1,518,955 in cash (December 31, 2023 - \$2,185,160) and working capital of \$979,291 (December 31, 2023 – \$1,840,900).

On June 21, 2024, the Company closed the first tranche of a private placement offering, raising \$315,000. The Company issued 1,968,750 flow-through common shares at a price of \$0.16. In connection with this closing, the Company paid cash finders' fees totaling \$15,900 to eligible finders.

On July 17, 2024, the Company closed the second and final tranche of a private placement offering, raising \$1,319,995. The Company issued 7,625,000 flow-through common shares at a price of \$0.16 per common share, and 714,250 common shares at a price of \$0.14 per common share. In connection with this closing, the Company paid cash finders' fees totaling \$73,200 to eligible finders.

The Company is a junior resource exploration and development corporation and, accordingly, it does not have the ability to generate sufficient amounts of cash from earnings or asset sales to pay for its operating costs, even in the short term. The Company budgets exploration, development and administrative expenses prudently and closely monitors monthly expenditures, investments and cash resources.

The activities of the Company, principally the exploration and development of mineral properties, are therefore financed through the sale of equity securities. These equity offerings generally take the form of private placements but may also include the exercise of warrants and options. The Company's ability to raise capital and the timing of such events will depend on the liquidity of the financial markets as well as the willingness of investors to finance resource-based junior companies.

LONG TERM OBLIGATIONS

The Company has no long-term debt obligations other than its Site Restoration Obligation ("SRO"). The Company accounts for obligations associated with the retirement of tangible long-lived assets by recording them as liabilities when those obligations are incurred, with the amount of the liability initially measured at the discounted (present) fair value of the obligation. Since the SRO is initially recorded at present value, an accretion expense is recorded on the statement of operations with a corresponding increase to the liability every quarter until the estimated time at which the obligation will occur. These obligations are capitalized in the accounts of the related long-lived assets and are amortized over the useful lives of the related assets. It is possible that the Company's estimate of its ultimate SRO could change as a result of changes in regulations, the extent of environmental remediation required and the means of reclamation or cost

CANADIAN GOLD CORP.
MANAGEMENT'S DISCUSSION AND ANALYSIS
Three and nine months ended September 30, 2024

estimates. Changes in estimates are accounted for prospectively from the period these estimates are revised.

Canadian Gold's site restoration provision of \$1,170,279 (December 31, 2023 - \$1,152,814) is based on management's best estimate of costs to abandon and reclaim mineral properties and facilities as well as an estimate of the future timing of the costs to be incurred.

Canadian Gold's asset retirement obligation was determined based on an undiscounted future liability of approximately \$1,248,820 adjusted for estimated inflation of 1.88% (December 31, 2023 – 1.88%) and discounted at 2.02% (December 31, 2023 – 2.02%), with reclamation occurring in 2027 (December 31, 2022 – 2027). During the three and nine months ended September 30, 2024, accretion expense of \$5,822 and \$17,465, respectively, (three and nine months ended September 30, 2023 - \$5,706 and \$17,119, respectively) was recorded.

SUMMARY OF QUARTERLY RESULTS

Following is a summary (in dollars) of selected financial data for the Company's last eight completed quarters:

	Sep. 30 2024	Jun. 30 2024	Mar. 31 2024	Dec. 31 2023	Sep. 30 2023	Jun. 30 2023	Mar. 31 2023	Dec. 31 2022
Net Loss	1,264,007	199,666	976,272	1,722,723	725,303	660,059	187,361	238,303
Loss per Share	(0.01)	(0.01)	(0.01)	(0.01)	(0.00)	(0.00)	(0.00)	(0.00)

The Company's level of activity and expenditures during a specific quarter are influenced by the availability of working capital, the availability of additional external financing, the time required to gather, analyze and report on geological data related to mineral properties, the results of the Company's prior exploration activities on its properties and the amount of expenditures required to advance its projects.

See Results of Operations (above) for more information.

CAPITAL STOCK INFORMATION

Authorized

The Company is authorized to issue an unlimited number of common shares without nominal or par value. The holders of the common shares of the Company are entitled to vote at all shareholder meetings and to receive such dividend as the Board of Directors of the Company in its discretion shall declare.

Issued and Outstanding

At September 30, 2024, the Company had 185,344,879 shares outstanding (December 31, 2023 – 174,211,879).

On January 21, 2024, 825,000 stock options were exercised at a price of \$0.05 per share.

On June 21, 2024, the Company closed the first tranche of a private placement offering, raising \$315,000. The Company issued 1,968,750 flow-through common shares at a price of \$0.16. In connection with this closing, the Company paid cash finders' fees totaling \$15,900 to eligible finders.

On July 17, 2024, the Company closed the second and final tranche of a private placement offering, raising \$1,319,995. The Company issued 7,625,000 flow-through common shares at a price of \$0.16 per common share, and 714,250 common shares at a price of \$0.14 per common share. In connection with this closing, the Company paid cash finders' fees totaling \$73,200 to eligible finders.

Warrants

At September 30, 2024, there were 5,831,812 warrants outstanding, with each warrant entitling the holder to acquire one common share of the Company at the prices noted below:

Incentive Stock Options

In January 2024, 825,000 stock options were exercised at a price of \$0.05 per share.

On September 30, 2024, the Company had 3,675,000 stock options outstanding with a weighted average exercise price of \$0.12 per share and a weighted average remaining life of 1.44 years.

OFF BALANCE SHEET ARRANGEMENTS

There were no off-balance sheet arrangements as at September 30, 2024.

RELATED PARTY TRANSACTIONS

Management compensation

The Company incurred the following expenditures charged by companies controlled by current directors and officers of the Company:

	Three Months Ended		Nine Months Ended	
	September 30,		September 30,	
	2024	2023	2024	2023
Stock-based compensation (<i>note 9</i>)	\$ ---	\$ ---	\$ ---	\$ 82,296
Management fees	70,350	31,500	210,232	86,500
Director compensation	28,000	26,893	88,241	70,983
Director consulting fee	---	---	---	10,000
Total management compensation	\$ 98,350	\$ 58,393	\$ 298,473	\$ 249,779

During the three and nine-months ended September 30, 2024, the Company paid its President and CEO a total of \$33,750 and \$64,125, respectively, for his role as an Executive Officer and \$4,000 and \$4,570, respectively, for his role on the Board. During the three and nine months ended September 30, 2024, the Company paid its previous President and CEO a total of \$NIL and \$36,307, respectively, for his role as an Executive Officer and \$NIL and \$4,252, respectively for his role on the Board.

For three and nine months ended September 30, 2023, the Company's then President and CEO was paid \$24,000 and \$64,000, respectively, for her role as an executive and was paid \$NIL and \$12,000, respectively, for her role as a director.

During the three and nine months ended September 30, 2024, the Company paid its Executive Vice President a total of \$24,000 and \$72,000, respectively, for her role as an Executive Officer and \$4,000 and \$7,420, respectively for her role on the Board. She ceased being a director on June 18, 2024.

During the three and nine months ended September 30, 2024, the Company paid its CFO a total of \$12,600 and \$37,500, respectively (three and nine months ended September 30, 2023 - \$7,500 and \$22,500, respectively).

During the nine months ended September 30, 2023, the Company paid \$10,000 to a director for his work as a mining consultant.

As of September 30, 2024, \$139,087 (December 31, 2023 - \$36,321) is owed to management and directors and is included in accounts payable and accrued liabilities on the consolidated statements of financial position.

CRITICAL ACCOUNTING POLICIES AND ESTIMATES

In preparing the Company's financial statements, estimates and assumptions are made by management that affect the amounts reported in the financial statements and accompanying notes. Based on historical experience, current conditions, expert advice and the application of accounting policies, management makes assumptions that are believed to be adequate and reasonable under the circumstances. The Company's accounting policies are the same as described in the audited financial statements for the year ended December 31, 2023.

INTERNAL CONTROLS OVER FINANCIAL REPORTING

The Chairman of the Board of Directors of the Company is responsible for establishing and maintaining controls and procedures regarding the communication of information about the Company, as well as internal controls over its financial reporting. The Chairman of the Board of Directors has conducted an evaluation of the controls and procedures regarding communication of information and has concluded these controls and procedures were effective for the year ended December 31, 2023. The Chairman of the Board of Directors is responsible for designing internal controls over financial reporting or for causing it to be designed under his supervision. During the year ended December 31, 2023, all existing systems have been documented and inadequacies have been corrected, as necessary. The Chairman of the Board of Directors has evaluated whether there were changes to internal control over financial reporting during the nine months ended September 30, 2024, that have materially affected, or are reasonably likely to materially affect, its internal control over financial reporting. No such changes were identified through this evaluation.

OUTLOOK

The Company continues to investigate financing and re-commissioning activities in respect of the Tartan Lake Gold Mine Project that are conducive to market conditions, which includes but is not limited to discussions with geological services companies as it relates to exploring and updating or assessing project economics. Given the recent price of gold, and results from exploration activities, the Company may have improved opportunities to fund and advance activities at the Tartan Lake Gold Mine Project, either directly or indirectly through funding partners. Notwithstanding that, Canadian Gold continues to actively review other opportunities and potential corporate transactions, particularly given the changing market conditions and the Company's share structure.

RISKS AND UNCERTAINTIES

The exploration and development of mineral deposits involves significant risks over an extended period of time and even a combination of careful evaluation, experience and knowledge may not be able to mitigate the risks. Few properties which are explored are ultimately developed into producing mines. The long-term profitability of the Company's operations will be primarily related to its ability to finance its working capital and operations which in part will be related to the cost and success of its exploration programs. Additionally, there are a number of factors beyond the Company's control, including but not limited to the availability of skilled personnel, qualified vendors, construction and production targets and timelines, anticipated timing of grant of permits and governmental incentives, favourable commodities markets, contractual commitments, litigation matters, the ability to mitigate financial and operational risks, the ability to access capital markets and the availability of critical equipment.

Substantial expenditures are required to establish reserves through drilling in order to determine the technical and economic feasibility of mining and extracting resources, and, if warranted, to develop the mining and processing facilities and infrastructure at any chosen site. Although substantial benefits may be derived from the discovery and mining of a mineralized deposit, it is impossible to ensure that the current mineral resources can be converted to mineral reserves or that the mineral properties in which the Company has an interest will result in profitable mining operations. Furthermore, there can be no assurance that the Company's estimates of future exploration and development expenditures will prove accurate and actual expenditures may be significantly higher than currently anticipated. Canadian Gold cannot provide any assurance that its proposed development plan will result in any commercial mining operation. Determining if a deposit will be commercially viable depends on a number of factors, including the attributes of the deposit, such as its size and grade, costs and efficiency of the recovery methods that can be employed,

proximity to infrastructure, land use and environmental protection. The effect of these factors cannot be accurately predicted, and the combination of these factors may result in the Company receiving an inadequate return on its invested capital, if any.

As stated above, the exploration and development of mineral projects always involves significant risks over an extended period of time even when a combination of careful evaluation, experience and knowledge is evident. There is no assurance that an exploration project can be profitable or successful. The long-term viability of the Company's operations will be in part correlated to the cost and success of its exploration programs, which may be affected by a number of factors beyond the Company's control, including but not limited to commodity prices, the availability of skilled personnel, qualified vendors and critical equipment.

Over the past year, businesses have generally witnessed ongoing supply chain issues and difficulties in attracting labour talent. While neither have affected Canadian Gold to date, there can be no assurance that operations would not be negatively impacted.

Mining operations and exploration activities are subject to national and local laws and regulations governing prospecting, development, mining and production, exports and taxes, labour standards, occupational health and mine safety and waste disposal, toxic substances, land use and environmental protection. To comply with such laws and regulations, Canadian Gold may be required to make capital and operating expenditures or to close an operation until a particular problem is remedied. The rise in forest fire activity in the Province of Manitoba represents a current example. In addition, if Canadian Gold's activities violate any such laws and regulations, Canadian Gold may be required to compensate those suffering loss or damage and may be fined if convicted of an offence under such legislation. It is also possible that future laws and regulations, or more stringent enforcement of current laws and regulations by governmental authorities, could cause additional expense, capital expenditures, restrictions on or suspensions of Canadian Gold's proposed activities and delays in the exploration of properties.

Although variable, depending on location and the governing authority, land reclamation requirements are generally imposed on mineral exploration companies (as well as companies with mining operations) in order to minimize long term effects of land disturbance. Reclamation may include requirements to control dispersion of potentially toxic substances and reasonably re-establish pre-disturbance land forms and vegetation. In order to carry out reclamation obligations, Canadian Gold may be required to allocate financial resources to land reclamation that might otherwise be spent on further exploration or development programs.

Canadian Gold cannot provide any assurances that title to its properties will not be challenged. Such property is owned, leased or held under option as unpatented and patented mining claims, mineral claims or concessions. The ownership and validity, or title, of unpatented mining claims and concessions are often uncertain and may be contested. Canadian Gold may not be able to obtain all necessary surface rights to develop a property. The failure to acquire any or all of such rights may prevent exploration and development, even if such exploration or development would be warranted by exploration results achieved. A successful claim contesting Canadian Gold's title to a property will cause Canadian Gold to lose its rights to explore and, if warranted, develop that property. This could result in Canadian Gold not being compensated for prior expenditures relating to the property.

Canadian Gold has limited financial resources. As at September 30, 2024, Canadian Gold has a working capital of \$979,291. Canadian Gold does not generate operating revenue and must finance its exploration activity by other means, including financing through joint ventures, debt financing and equity financing. Canadian Gold cannot provide any assurance that funding will be available for exploration or development or to fulfill anticipated obligations under the existing property agreements with respect to its property. If Canadian Gold fails to obtain necessary financing, it may have to delay or cancel exploration and / or development, or alternatively, consider transactions with third parties.

Access to capital is typically a challenge facing resource-based junior companies. Over the past number of years very few equity financings were being completed for higher-risk resource-based junior companies. However, given the increase in the price of gold, there may be a corresponding positive effect for Companies such as Canadian Gold with brown-fields gold assets, if the price of gold continues to rise.

This recent relative strength of metal prices has encouraged increases in mining exploration, development and construction activities around the world, however, it may result in increased demand for, and the cost of, exploration, development and construction services and equipment. While the market conditions mentioned above have had a moderating effect on the costs of such services and equipment, increases in such costs may continue with sustained or increasing metal price levels or an improvement in global market conditions. Increased demand for services and equipment could result in delays if services or equipment cannot be obtained in a timely manner due to inadequate availability and may cause scheduling difficulties due to the need to coordinate the availability of services or equipment, any of which could materially increase project exploration, development and/or construction costs.

Canadian Gold will compete with other exploration and development companies, many of which have greater financial resources than Canadian Gold or are at more advanced stages of development, for the acquisition of mineral claims, leases and other mineral interests as well as for the recruitment and retention of qualified employees and other personnel. If Canadian Gold requires and is unsuccessful in acquiring additional mineral properties or personnel, Canadian Gold may not be able to grow at the rate desired or at all.

If commercial production is possible, Canadian Gold will require additional funds to place an ore body into production. Substantial expenditures will be required to establish ore reserves through drilling, develop metallurgical processes to extract the metals from the ore and rehabilitate the mining and processing facilities at Tartan Lake. The sources of external financing that Canadian Gold may use for these purposes include public or private offerings of debt, convertible notes and equity. In addition, Canadian Gold may enter into one or more strategic alliances and may utilize one or a combination of all these alternatives. Canadian Gold cannot provide any assurance that the financing alternative chosen will be available on acceptable terms, or at all. If additional financing is not available, Canadian Gold may have to postpone the development of, or sell, certain of its properties.

Forward Looking Statement

All statements other than those of a historical nature are "forward-looking statements" that may involve a number of unknown risks, uncertainties and other factors. There can be no assurance that such statements will prove to be accurate, and actual results and future events could differ materially from those anticipated in such statements.

This document contains forward-looking information that is based on expectations, assumptions and estimates as of the date of this document. The Company's forward-looking information is information that is subject to known and unknown risks and other factors that may cause future actions, conditions or events to differ materially from the anticipated actions, conditions or events expressed or implied by such forward looking information. Forward-looking information is information that does not relate strictly to historical or current facts, and can be identified by the use of the future tense or other forward-looking words such as "believe", "expect", "anticipate", "intend", "plan", "estimate", "should", "may", "could", "would", "target", "objective", "projection", "forecast", "continue", "strategy", or the negative of those terms or other variations of them or comparable terminology.

Forward-looking statements include among others: any future development of the Tartan Lake Gold Mine deposit, the timing and completion of the drilling and other exploration activities, delineation of a mineral resource and the conversion of minerals resources to mineral reserves.

In formulating the forward-looking information above, the Company has made assumptions regarding general financial market conditions and the availability of financing.

While the Company anticipates that subsequent events and developments may cause the Company's views to change, the Company does not have an intention to update this forward-looking information, except as required by applicable securities laws. This forward-looking information represents management's views as of the date of this document and such information should not be relied upon as representing our views as of any date subsequent to the date of this document. The Company has attempted to identify important factors that could cause actual results, performance or achievements to vary from those current expectations or estimates expressed or implied by the forward-looking information. However, there may be other factors that cause results, performance or achievements not to be as expected or estimated and that

could cause actual results, performance or achievements to differ materially from current expectations. There can be no assurance that forward-looking information will prove to be accurate, as actual results and future events could differ materially from those expected or estimated in such statements. Accordingly, readers should not place undue reliance on forward-looking information. These factors are not intended to represent a complete list of the factors that could affect us. See also "Risks and Uncertainties".

Management's Responsibility

Management is responsible for all information contained in this annual MD&A and the accompanying Financial Statements. The Consolidated Financial Statements for the period ended September 30, 2024, have been prepared in accordance with IFRS and include amounts based on management's informed judgments and estimates. The financial and operating information included in this report is consistent with that contained in the unaudited condensed interim financial statements for the period ended September 30, 2024, in all material aspects.

Management maintains internal controls to provide reasonable assurance that financial information is reliable and accurate, and assets are safeguarded.

Approval

The Board of Directors has approved the financial statements on the recommendation of the Audit Committee.
